

Solvent Free One Component Pedestal Adhesive

Polyped¹

The solvent free one component pedestal adhesive

Polyped1 is a solvent free, one component moisture-curing pedestal adhesive developed to meet exacting Raised Flooring applications in a new climate of environmental awareness.

Strength • Reliability • Innovation

Chemique[®]

Solvent Free One Component Adhesive

Polyped1 has been designed utilising Chemique's rigorous quality control procedures and experience of application techniques, offering customers a number of advantages:

Solvent Free

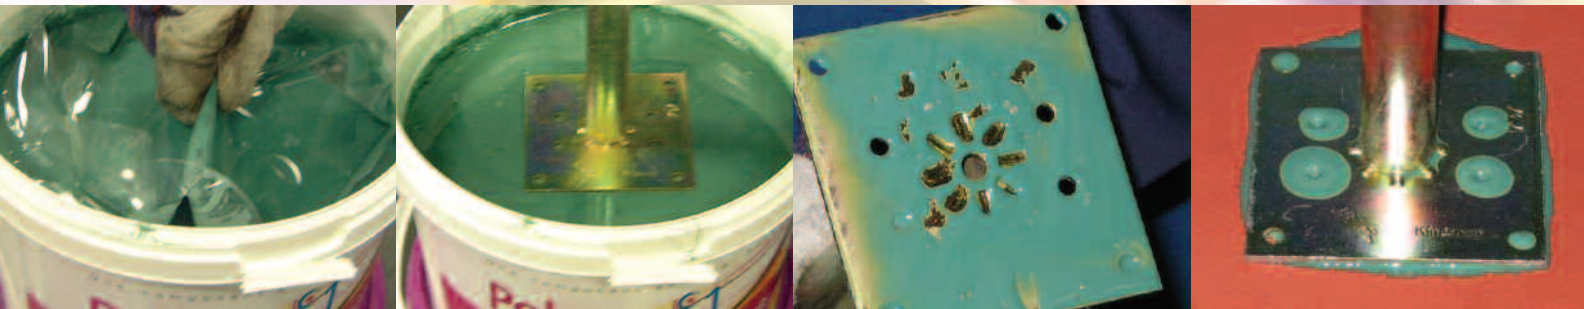

Polyped1 contains no VOCs. This ensures that customers comply with the latest environmental regulations.

Excellent Metal Adhesion

Polyped1 forms a strong and extremely flexible bond providing exceptional adhesion to metal substrates and concrete sub-floors even on the most inconsistent floor.

Part of the Polyped Range

Polyped1 is part of the Polyped range of products specially developed for the Raised Access Flooring industry.

Permanent Bond

Polyped1 complies with the T15 "pedestal strength" test and the T42 "swinging bag" test laid down by the P.S.A for pedestals up to 600mm high

No Mixing Required

Polyped1 does not require any mixing and is ready to be used straight from the bucket.

Less Wastage

The whole bucket of Polyped1 does not have to be used at the same time. As long as the container is tightly sealed after use, the adhesive can be stored until it is needed again. This also makes Polyped1 ideal for repair and refurbishment requirements where time and waste management are of importance.

More Pedestals per Bucket

It is recommended to use Polyped1 with the Universal Floor Primer as this acts both as a dust suppressant and helps strengthen the floor bond area. Each 7kg Polyped1 kit will bond in excess of 260 pedestals depending on the quality of the sub-floor.

The Chemique Raised Flooring Range

As a leading specialist supplier, Chemique offers a full range of adhesives, coatings and sealers, with supporting services, for the manufacture and installation of Raised Access Flooring Systems.

Panel Production Products

- Floor panel manufacturing adhesive
- Covering adhesive
- Cleaning solvent

Site Installation Products

- Sub-floor concrete sealer
- Pedestal adhesive
- Threadlocking sealer
- On-site repairs adhesive
