

Hazard Free Formula • Two Component Pedestal Adhesive

Polyped²™ HF

The Hazard Free two component pedestal adhesive

Polyped2 HF is a Hazard Free, solvent free, two component pedestal adhesive developed to meet exacting Raised Flooring applications in a new climate of environmental awareness.

Polyped2 HF has been designed utilising Chemique's rigorous quality control procedures and experience of application techniques, offering customers a number of advantages.

Strength • Reliability • Innovation

Chemique[®]

Hazard Free Formula • Two Component Pedestal Adhesive

Completely Hazard Free

Polyped2 HF is completely solvent and hazard free. This ensures that customers meet current environmental legislations and eliminate health and safety hazards for operatives.

Permanent Bond

Polyped2 HF complies with the T15 "pedestal strength" test and the T42 "swinging bag" test laid down by the P.S.A for pedestals up to 600mm high.

Applications

Polyped2 HF is an innovative adhesive specially formulated for bonding metal pedestals to concrete when installing raised flooring systems. However, it may also be used in many other applications where a two component hazard free adhesive is required with good adhesion and flexibility. Polyped2 HF has already been used by some of the largest manufacturers/installers in the access floor industry. It provides outstanding performance exceeding the demanding standards required by the industry.

Single Package

Polyped2 HF comes in a single package which has been carefully designed to ease the mixing of the two parts. Both parts come within a 6.2 Litre bucket. The part B rests in a cuvette which, when removed, provides the extra space for adding and mixing the part B to the blue part A in the main container.

Easily Mixed

The two components are coloured blue and yellow which, when mixed, form a uniform green colouration to identify that it is ready to use.

Up to 4 or 5 Hours Pot Life

This system gives plenty of extra time and freedom between mixing and application.

Excellent Metal Adhesion

Polyped2 HF forms a strong and extremely flexible bond providing exceptional adhesion to metal substrates and concrete sub-floors even on the most inconsistent floor.

Reduced Storage Space and Disposal Problems

Due to the single package Polyped2 HF considerably reduces storage and transport space requirements and because it is Hazard Free, it also reduces disposal and related health and safety issues.

The Chemique Raised Flooring Range

As a leading specialist supplier, Chemique offers a full range of adhesives, coatings and sealers, with supporting services, for the manufacture and installation of Raised Access Flooring Systems.

Panel Production Products

- Floor panel manufacturing adhesive
- Covering adhesive
- Cleaning solvent

Site Installation Products

- Sub-floor concrete sealer
- Pedestal adhesive
- Threadlocking sealer
- On-site repairs adhesive
